Education

Carnegie Mellon University, PA Expected December 2027

Master of Information Systems Management

- Coursework: Machine Learning in Production, Decision Making Under Uncertainty, Database Management, Python for Software Developers
- Awarded 15% merit based scholarship

MKSSS's Cummins College of Engineering for Women, Pune 2024

B.Tech. - Electronics And Telecommunication Engineering, Honors in Data Science

- Coursework:Introduction to Data Science, Artificial Intelligence, Deep Learning, Machine Learning with Python, Web Data Mining, Big Data Analytics

Technical Skills

- Languages: Python, Java, SQL, JavaScript
- AI/ML: TensorFlow, Deep Learning, Regression, Classification, Neural Networks, Time Series, Hypothesis Testing
- Data: MySQL, MongoDB, Pandas, Plotly
- Cloud and Infrastructure: AWS, Azure, Docker, Kubernetes
- Backend: REST APIs, Microservices
- DevOps: Git, GitHub, GitLab, Jenkins, Bitbucket, Azure DevOps

Work Experience

Software Engineer | ***Amdocs*** August 2024 – July 2026

- Automated manual test-case execution for AT&T's fallback system using an internal test-automation framework, cutting regression testing time by 40%.
- Validated real-time billing accuracy across wireless and fiber services on an enterprise bill-generation platform processing millions of customer bills monthly for AT&T.
- Migrated core billing services from a monolithic architecture to microservices using Java, Spring Boot, and REST APIs, reducing deployment time per release by 30% and unlocking independent service scaling.
- Built an Excel-based bulk attribute-update tool for account activation team, integrating with third-party activation systems to eliminate manual per-record updates across 3 teams and save 15+ hours of manual effort per week.
- Automated data loading and rule validation across dozens of Oracle SQL tables through API-driven loaders, replacing manual SQL updates and shrinking data-refresh turnaround from days to hours.

Software Engineer Intern | ***OLA*** July 2023 – December 2023

- Enhanced the post-service star-rating experience across driver and customer applications for rides, packages, and food delivery, contributing to a platform serving 10M+ monthly active users.
- Collaborated with product designers in Figma to translate product requirements into responsive, user-focused interfaces, delivering 5+ UI improvements across customer-facing workflows.

Software Engineer Intern | ***Microsoft*** May 2023 – July 2023

- Developed an internal CI/CD automation tool for a hybrid cloud product using Azure DevOps, Docker, GitHub, and Kubernetes, reduced build, test, and deployment cycle time by up to 90%, enabling faster release cycles.

Projects

Age and Gender Prediction

- Trained a CNN-based deep learning model to predict age and gender from facial images.
- Compared Adam, Adagrad, and Adadelta optimizers to evaluate impact on convergence speed and prediction accuracy.
- Implemented solution using Python and TensorFlow.

Interactive Graph- Data Analysis GitHub

- Developed an interactive dashboard for automotive data analysis, enabling dynamic comparison across multiple attributes.
- Built visualizations using Python and Plotly to support exploratory data analysis.

Research Paper

Behind the Words: Unmasking Bias Lurking in LLMs and Data IEEE Xplore

- Designed a comparative bias-evaluation framework for 3 language models (BERT, RoBERTa, GPT-2) across 3 benchmark datasets (StereoSet, CrowS-Pairs, Indian-BhED), covering racial, religious, gender, and caste biases.
- Implemented scoring functions to quantify model preferences for stereotypical versus anti-stereotypical responses, supporting consistent cross-model and cross-dataset evaluation.
- Identified substantial variation in bias across models, with GPT-2 exhibiting 72% religious and 62% racial bias, while RoBERTa exhibited 61% caste bias, published at IEEE Pune Conference 2025.
